

**CLINTRAK® IS A PROPRIETARY SUITE OF POWERFUL
STUDY AND DATA MANAGEMENT TOOLS**

The most timely, secure, and cost-effective way to track,
interpret, and communicate information.

CLINTRAK

MEDPACE

THE ADVANTAGE OF **FOCUS**

Custom solutions deliver powerful results

Medpace offers a proprietary suite of leading edge technologies to track, interpret, and communicate information in the most timely, secure, and cost-effective manner. Each application in the ClinTrak® suite is designed to be completely transparent and work together seamlessly throughout every stage of your project.

Featuring an intuitive, web-based interface that provides access to near real-time data and study metrics, this comprehensive management tool organizes all aspects of the drug development process. Easily customizable for study-specific enhancements to accelerate turnaround time, each application has full data exchange capabilities, allowing for easy import / export of data from other systems, including laboratories, drug management vendors, IVRS, and our core data services. Developed and maintained by a team of Medpace experts with decades of IT and software experience in the CRO industry, ClinTrak is built with the latest enterprise-level technologies and features two data centers for tiered redundancy.

Study management

A full-featured Clinical Trial Management System (CTMS), ClinTrak SM provides Sponsors with near real-time web access for the complete tracking of clinical data and study metrics.

Key features:

- Secure posting and sharing of study documents, team-meeting minutes, status, regulatory documents, and other important items
- Data available via dashboard graphs, printable reports, and data exports
- Submissions and site activations
- Site personnel and study contacts
- Subject enrollment including specific fail reasons and withdrawal trends
- Electronic monitoring trip reports
- Site supply inventory
- 21 CFR Part 11 compliant
- Ability to drill down to research site level

Interactive Voice Response System (IVRS)

Featuring both touch-tone phone-based and web-based interfaces, ClinTrak IVRS can be accessed globally by authorized clinical site personnel 24 hours a day, 7 days a week.

Key features:

- Complete subject progress tracking
- Subject randomization
- Site Investigational Product (IP) management
- Multiple medication types
- 24 / 7 IVRS help desk

Data management

A centralized location for the data management team, ClinTrak DM allows for secure and accurate capture of data for your study.

Key features:

- Custom designed data entry screens
- Case report form tracking
- Rule-based edit check engine
- Data query generation and tracking
- Medical coding
- Flexible and customized reports

Laboratory information management

A state-of-the-art, proprietary Laboratory Information Management System (LIMS), ClinTrak Lab, gives you the power to compare customized results from subjects in Prague to subjects in Mumbai in near real-time.

Key features:

- Daily lab reports
- Management information
- Cumulative results and trend graphing
- Secure, role-based access
- Study-specific project management screens

Imaging management

Medpace ClinTrak Imaging provides central tracking, data management, quantitative and qualitative analysis, and image-related reporting information.

Key features:

- Site personnel and study contacts
- Technician tracking
- Subject eligibility
- Subject scan reports
- Image tracking, anonymization, and masking for blinded assessments
- Independent reader module
- Image viewing capabilities
- Secure, customized access-based role for sharing of study-related documents or reports

The Medpace difference

Medpace is a global, research-based drug development company led by top therapeutic and regulatory experts who are driven to further the advancement of pharmaceutical agents for use in cardiology, metabolism, and oncology.
